

Smart Apply[®]

Intelligent Spray Control System[™]

SET. SPRAY. SAVE. PROTECT.

The Smart Apply[®] Intelligent Spray Control System[™] is designed for growers of high-value crops seeking to elevate their spraying while decreasing costs, water use, and environmental impact.

**GOT HIGH-VALUE
CROPS?**

Whether you are breathing new life into your existing air blast or over-the-row sprayer, or if you're looking to upgrade to a brand-new sprayer, SmartApply transforms your equipment into a high-tech precision spraying system.

How Our Precision Spraying Works

The Smart Apply system applies chemicals where most needed. The system uses LiDAR, a pulsed laser, to determine distance to and size and density of the tree to be sprayed. Smart Apply automatically delivers the right amount of spray to each tree. It also adjusts spray to the speed of the tractor. Expect an average reduction in chemical use of 50% but as high as 90% in younger, less dense trees. Smart Apply captures and uploads to the Cloud the date and time of spraying, size and maturity of the trees sprayed, and amount of chemicals used— invaluable data for growers.

Smart Apply® Spraying

Traditional Blast Spraying

Save With Smart Apply®

Up to 73% Chemical & Water Reduction

Up to 87% Less Airborne Drift

Up to 93% Less Run Off
